TREE REMOVAL PROGRAM 2018/19

Clean up your yard and reduce Queensland fruit fly activity and infestation within your community.

For a limited time, the Greater Sunraysia Pest Free Area (GSPFA) is offering urban residents funding assistance to remove trees from their gardens that host Queensland Fruit Fly (conditions apply).

Removal of unwanted, or unmanageable fruit trees, offers a more permanent solution to the problem because the flies can't lay their eggs without a host fruit.

The trees will be cut down by the GSPFA contractor at ground level, mulched and taken to landfill.

To take advantage of this limited offer please contact the GSPFA on **5022 0327** or via our website www.pestfreearea.com.au

Photo by Joanne Wilson

Sunraysia is one of the largest fruit growing regions in Australia producing millions of dollars of fresh produce exporting to the world. It's up to us as a community to protect it from damaging fruit fly.

Target QFF Host Trees for removal:

- Loquats
- Feijoas
- Apricots
- Peaches
- Nectarines
- Plums
- Apples
- Pears
- Quinces
- Guavas
- Pomegranates
- Persimmons
- Grapefruit
- Citrus
